Comprehension:

Read the following information carefully and answer the given questions.

India's economy is firmly out of the throes of the pandemic blues, the higher-than-expected 7.2% GDP growth last year could actually be an 'underestimate', and the country is now poised for a decade, if not more, of uninterrupted 6.5%-7% growth, even if no further reforms are undertaken. This was the key message from Chief Economic Advisor, V Anantha Nageswaran's prognosis of the state of the economy, conveyed to industry leaders last week. India, he asserted, could now grow for a longer period of seven to 15 years as China did between 1979 and 2008 without 'running into overheating problems' as it did after three-four years of strong growth in recent decades. Among the reasons for his optimism - strong momentum, better macro fundamentals with inflation and trade deficits easing in recent months and cleaner bank and corporate balance sheets, bolstered by reforms such as Goods and Services Tax (GST) and digitisation that are spurring formalisation.
